

*Of special note: In July, NASS will collect updated information on 2022 acres planted to barley, canola, corn, dry edible beans, oats, sorghum, soybeans, sunflowers, and Durum and other spring wheat in 3 states. Excessive rainfall had delayed planting at the time of the survey, leaving a portion of acres still to be planted in Minnesota, North Dakota, and South Dakota. If the newly collected data justify any changes, NASS will publish updated acreage estimates in the Crop Production report to be released at noon ET on Friday, August 12.*

Producers seeded 3.05 million acres of barley for the 2022 crop year, up 15 percent from the previous year. Record low planted acres are expected in Michigan, Minnesota, New York, and Utah. Harvested area, forecast at 2.40 million acres, is up 23 percent from 2021. However, record low harvested acres are forecast in both Michigan and Wisconsin.

Nationwide, 97 percent of the barley acreage was sown by June 12, three percentage points behind last year and 2 percentage points behind the 5-year average. Ninety-six percent of the barley acreage had emerged by June 19, two percentage points behind last year but equal to the 5-year average. Heading of the Nation's barley acreage advanced to 8 percent complete by June 19, nine percentage points behind the previous year and 5 percentage points behind the 5-year average. Overall, 51 percent of the barley acreage was reported in good to excellent condition on June 19, compared to 39 percent at the same time last year. Dry conditions have persisted throughout the three largest States for barley planted acres (Idaho, Montana, and North Dakota).
